

GHG Emissions Reduction Target Statement (2024-2040)

This statement sets out Bridgnorth Aluminium Ltd intermediate greenhouse gas (GHG) emissions reduction targets. Our disclosed targets have been established in alignment with limiting global warming to 1.5°C, using the endorsed Aluminium Stewardship Initiative (ASI) methodology. Targets disclosed in this statement have been determined using 2024 as our baseline year and extend to our 2040 intermediate target.

Our approach to achieving a reduction in Scope 1 and Scope 2 GHG emissions intensity by 2040 includes both Casting and Rolling operations, each of which has a defined GHG emissions reduction pathway. Progress will be measured and reviewed annually to ensure alignment with pathways, while supporting future technology, energy efficiency and decarbonisation opportunities.

2024 Baseline Emissions Intensity (tCO₂e/t)

Operational Area	Emissions Intensity (tCO ₂ e/t)
Casthouse Operations	0.17
Rolling Operations	0.25

2040 Target Emissions Intensity (tCO₂e/t)

Operational Area	Emissions Intensity (tCO ₂ e/t)
Casthouse Operations	0.11
Rolling Operations	0.16

These targets illustrate that Bridgnorth Aluminium will reduce Scope 1 and Scope 2 GHG emissions intensity across our Casting and Rolling operations by 35% by 2040, relative to the 2024 baseline year.

Bridgnorth Aluminium recognises the importance of reducing emissions associated with our immediate operations and remains committed to achieving these targets. We will continue to monitor and report performance of our Scope 1 and Scope 2 emissions intensity through our annual sustainability reports. These metrics will be expressed as tonnes of CO₂ equivalent per tonne of product (tCO₂e/t).

Any material changes to our production processes, organisational boundaries, or other influential factors that may affect our direct and indirect emissions will be documented in future target reviews.

Our reduction targets provide a clear pathway towards long-term decarbonisation and demonstrate our commitment to a more sustainable future.

Ilias Avgerinos
